VÝPOČET

Figure 10 consists of two side-by-side line graphs. The left graph plots Q_d (MPa) on the x-axis (0 to 50) against depth (m) on the y-axis (0 to 8.5). The right graph plots F_s (Nm) on the x-axis (0 to 200) against depth (m) on the y-axis (0 to 8.5). Both graphs show a red line for Q_d and a blue line for F_s . The Q_d line starts at 0 at 0m, rises to about 25 MPa at 0.5m, then fluctuates between 10 and 30 MPa down to 2.5m, and then rises to about 45 MPa at 3m. The F_s line starts at 0 at 0m, rises to about 100 Nm at 0.5m, then fluctuates between 50 and 150 Nm down to 2.5m, and then rises to about 180 Nm at 3m.
